## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species A, Figure 1 – 3, drawn to the rotation-prevention means in the form of a pin.

Species B, Figure 4 – 6, drawn to the rotation-prevention means in the form of an inner protuberance.

Species C, Figure 7, drawn to the rotation-prevention means in the form of a centrally inserted securing plate provided with an inner protuberance.

Applicant is required, in reply to this action, to elect a single species, A-C, to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 1.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Although the concept of preventing rotation maybe common to Species A-C, the inventive structure specifics of the pin of Species A is mutually exclusive to the inventive concept of the structure specific inventive solution of Species B, the mechanical inner protuberance, and Species C, the centrally inserted securing plate with the inner protuberance integrally incorporated. Since the species have mutually exclusive structural inventive concepts, single general inventive concept is deemed lacking.

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
